# DAHLIAS

**Location:** Any good garden soil will grow dahlias and they will do equally well on high or low land. A sunny, airy location is best.

**Planting and Cultivation:** Good stable manure ploughed in, in the fall and turned again the following spring makes the ground light. In this locality plant from May 15 to June 15. Dig a hole six inches deep. Lay the bulb flat and cover four inches. Two feet apart in the rows and each row three feet apart is best for proper growth, but if space is limited they can be planted closer.

**Blooms for Display:** In order to get the largest flowers it is quite necessary that you disbud severely. Pinch out all small side branches and buds, letting only the largest mature. Unlike the Gladiolus the Dahlia is a continuous bloomer until frost kills the tops.

(Trial gardens have been established where new varieties of Dahlias can be under the observation of expert judges. Ratings have been made by combining the scores of as many dahlias experts and gardens as possible, and this has been extended to old as well as new varieties. Prof. J. B. S. Norton has published in pamphlet form a valuable list of such ratings. The 1926 edition will soon be out and the price is 75 cents. You should add this to your order for Dahlias. A. M. # GLADIOLI

**Planting and Culture.** Plant the bulbs from May 1 to June 15, four inches deep in heavy soil and six inches deep in light soil with full exposure to the sun. It is better if the ground has been prepared the fall before with fresh stable manure well forked in and turned again the following spring.

The gladiolus is a great drinker. Don't give it merely a sip. Give it plenty of water while you are doing it, even if you do not water more than once a week. After sundown is best. Larger flowers will repay you for the extra care. Stir the soil the next day after rain or after sprinkling. Never allow the soil to crust.

# BE GLAD with the GLADS

## BUY DOWS' GLADIOLUS BULBS NOW

It will be to your advantage in more ways than one to get your supply before any bulbs are put into storage for the winter.

There will be the advantage of a lower price, the advantage of immediate delivery, the advantage of having the bulbs on hand when the season for planting arrives.

It is well to take "time by the forelock". Preparedness in business is as wise as preparedness in the government or any other important thing.

There has been a great and increasing demand for my Gladiolus bulbs, which at times, especially in the early Spring, has tasked my extraordinary ability to fill orders instantly. One reason for this is the fact that my bulbs give entire satisfaction. They are the highest quality at the lowest price.
